SUMMARY

Software QA Engineer with around two years of experience testing web and mobile apps across Android and iOS. I enjoy digging into products to find the issues others miss, whether that's through hands-on manual testing, exploratory sessions, or API checks in Postman. I've worked closely with developers and designers in Agile teams, helped validate AI-driven features like chatbots and transcription, and used Firebase Test Lab and Crashlytics to keep apps stable and crash-free. I care about shipping software that actually works well for the people using it.

TECHNICAL SKILLS

Testing & QA: Manual Testing, Exploratory Testing, Functional, Regression, Usability, Compatibility & Smoke Testing

API & Automation: Postman (API Testing), Cypress (JavaScript), JMeter (Performance), OWASP ZAP (Security)

Tools & Platforms: Jira, Firebase Test Lab, Firebase Crashlytics, Git, Android & iOS Devices

Test Design: Test Case Writing, Bug Reporting, Test Plans, Defect Tracking, Edge-Case Analysis

Methodologies: Agile, Scrum, SDLC, STLC

PROFESSIONAL EXPERIENCE

Software Quality Assurance Engineer

Ninesol Technologies

March 2025 – Present

Islamabad, Pakistan

- Ran manual testing across web, Android, and iOS for more than ten apps, making sure each release felt polished and worked the way it should
- Used Firebase Test Lab to check how apps behaved on a range of real Android devices, catching critical bugs and performance issues before they reached users
- Kept an eye on stability and crash reports through Firebase Crashlytics, which helped the team raise crash-free session rates
- Tested AI features such as chatbots, transcription, and recommendation engines to confirm the NLP and ML flows returned accurate, reliable results
- Wrote and maintained test cases, test plans, and clear bug reports in Jira, keeping everything in step with the Agile sprint cycle
- Worked side by side with developers and designers to sharpen test strategies and improve the overall user experience

Software Quality Assurance Intern

Codes Orbit

Dec 2024 – March 2025

Islamabad, Pakistan

- Carried out manual and exploratory testing to find, document, and report defects, which steadily improved app stability
- Designed and ran test cases to check functionality, performance, and reliability across web and mobile apps
- Did API testing in Postman, verifying request-response cycles, error handling, and overall reliability
- Handled usability, regression, and compatibility testing across different devices and platforms
- Teamed up with developers and other QAs to refine test strategies and smooth out the testing workflow

EDUCATION

Iqra University

Bachelor of Science in Software Engineering

Islamabad, Pakistan

Feb 2021 – Feb 2025

KEY PROJECTS

GetChatly

Mobile & Web App

Centralized AI Chat Platform

Manual, API & AI-Feature Testing

- Tested a platform that brings several AI chat models (GPT-4, GPT-4o, DeepSeek, Gemini) together under one subscription
- Checked that switching between chat models worked smoothly and that each model returned sensible, accurate responses
- Walked through the full subscription flow end to end, from sign-up to payment, to catch any breaks along the way
- Verified UI behavior and chat history across both the mobile and web versions of the app

OfferLanded

Mobile & Web App

Job & Recruitment Platform

Functional & End-to-End Testing

- Tested job search, filtering, and application flows on a recruitment platform connecting candidates with employers
- Validated the offer and hiring workflow, including candidate onboarding and status updates
- Checked notifications and employer dashboards to make sure both sides stayed in sync throughout the process
- Ran end-to-end testing across mobile and web to confirm a consistent experience on every platform

SoapSuds

Mobile & Web App

Healthcare / Telemedicine App

Functional & Security-Focused Testing

- Tested virtual consultations between patients and doctors to make sure sessions ran reliably from start to finish
- Validated audio recording features and the automated medicine suggestion flow
- Confirmed that medical history was stored securely in the cloud, with data integrity kept intact
- Paid close attention to privacy and security, given the sensitive patient data involved

Additional Mobile & Web Apps: Flight Tracker (real-time flight tracking, map rendering, API integration), AI Transcribe (real-time multilingual speech-to-text), PDF Printer (document conversion & cloud printing), Time Warp Scan (video filter & performance testing), Passport Photo Maker, Deen (iOS app-blocking & screen-time), Moto Rider & Driver (ride bidding & fare logic), Artostream (iOS art marketplace), Ezy Captures, and FalkonData (secure healthcare document management).
